## 0/1-10V Constant Voltage LED Driver

## Model No.: LN-75-12, LN-75-24

## Features

- Dimming interface: 0-10V, 1-10V, 10V PWM, Resistor, AC Push-Dim
- 1 channel constant voltage output, Max. total output power 75W
- Synchronize on multiple number of LED drivers
- Over-heat / Over-load / Short circuit protection, recover automatically
- Full protective plastic case
- Suitable for indoor LED lighting application
- 3 Year, 30,000hr warranty

## Applications

- Suitable for LED related fixture or appliance which use LED light bar and LED tape (like LED Decoration or Advertisement devices).
- Office / Commercial / Domestic Lighting, Hotels, Retail and Display.
- Use for retrofit upgrades \& new luminaire designs.

## Mechanical Structures and Installations

Technical Parameters

## Wiring Diagram

## 1.0/1-10V Connection

- The 0/1-10V input is operable via commercially available simple rotary wall switchs designed for 0/1-10V dimming equipment or from decicated system central dimming controllers.
- Compliant with 0-10V, 1-10V, 10V PWM, RX(4 in 1)
- We recommend the number of LED drivers connected to 0/1-10V dimmer does not exceed 50 pieces, The maximum length of the wires from dimmer to LED driver should be no more than 50 meters
- If the LED driver be used with the RF remote or Push-Dim interface prior to using the 0/1-10V interface, the $0 / 1-10 \mathrm{~V}$ signal should change over $10 \%$ to return $0 / 1-10 \mathrm{~V}$ control.

## 2. AC Push-Dim connection

The provided AC Push-Dim interface allows for a simple dimming method using commercially available non-latching (momentary) wall switchs.

- Short press:

Turn on or off light.

- Long press (1-6s):

Press and hold to step-less dimming, With every other long press, the light level goes to the opposite direction.

- Dimming memory:

Light returns to the previous dimming level when switched off and on again, even at power failure.

## - Synchronization:

If more than one LED driver are connected to the same push switch, do a long press for more than 10 s, then the system is synchronized and all lights in the group dim up to $100 \%$.
This means there is no need for any additional synchrony wire in larger installations.
We recommend the number of LED drivers connected to a push switch does not exceed 25 pieces,
The maximum length of the wires from push to LED driver should be no more than 20 meters.

## Dimming Curve
